problem statement

Most women between ages 45 - 55 go through menopause, which includes symptoms such as hot flashes, skin dryness, weight gain, hair changes, fatigue, insomnia, which can all negatively affect a woman's well-being.

Each women experience completely different symptoms during their menopause.

As a phase in life all women experience, we believe not enough attention and care is given in this topic, many women suffer in silence.

wearable menopause symptoms detection and ml ring device

Minimal style to enhance wearability

Ring as a wearable device to promote long-term wear as well as social acceptability. The sleek hardware which is stylish to pair with other jewellery/outfits and increase uptake on wearable technology

This device's objective is to be able to track hormonal levels, stress levels, temperature levels and other symptoms of menopause through a minimalist wearable tracking ring device.

It processes that data and present it on a user-friendly UI on a phone application that can display to the user their health data, advice and information on the relevant stage for the user
